

# Gap Filling Mortar

## Description

Blowerproof Gap Filling Mortar is a rapid hardening, non-shrink, cementitious mortar for gap filling. Designed for use as a gap filling material when installing Blowerproof Liquid Brush, Blowerproof Liquid Roller and Blowerproof Liquid Spray

## Advantages

- Non shrink
- Rapid setting
- Easy to use
- Requires no specialist skills or tools
- Repairs can be carried out quickly
- Can be applied in most weather conditions
- Supplied prepacked for immediate use

## Composition

Blowerproof Gap Filling Mortar is a polymer modified mortar supplied in a 5 litre waterproof pail. Inside is 5kgs of premixed powder requiring the addition of 900ml of clean potable water.

## Mixing the Blowerproof Gap Filling Mortar

Remove the bag of powder from the tub, use the tub as the mixing vessel

- Add enough water to powder to give a workable mix
- Mix by hand or use a slow speed stirrer
- Do not mix more than can be applied within the working life of the mortar (generally 5-10 minutes depending on temperature)
- A trowelling mortar consistency will not bleed or shrink

## Application Procedure

- The minimum application depth for Blowerproof Gap Filling Mortar is 2mm
- The surface must be clean and structurally sound Avoid 'feather edging' by cutting out the repair area Damp the surface with clean water
- Whilst the surface is damp apply the mixed Blowerproof Gap Filling Mortar
- Apply by hand and finish with a float or trowel to achieve the required profile
- The material will be strong enough to withstand impact after 1-2 hours
- When applying material in extremely warm or cold temperatures, the working life and initial 'set' will be affected

Manufactured in the UK
