

STÖRNCH SpiraSafe Dampers, Shutters, Air Filter Boxes & Filters

STÖRNCH SpiraSafe is a well-established system of ventilation fittings, with factory installed EPDM rubber gaskets. The system is available in a range of sizes (from Ø100 to Ø400mm), and offers a host of advantages to both the installer and the end user. The double gasket ensures tight and permanent connections between system components, which are air-tight and do not require the use of mastic or sealant.

Back Draught Shutter

- A one-way valve, using aluminium lamellae which prevent air flow in the wrong direction

- Special construction allows easy replacement of the filter element from the metal box housing

Air Filter Box & Filters

Single Blade Damper (VCD/SBD)

USES

- Suitable for high, medium and low pressure applications

CONSTRUCTION

- Galvanised Steel pressed bend, seam-welded and calibrated, c/w EPDM rubber gaskets

FEATURES

- Male connections which fit directly inside the spiral ducting
- Exceptional Class D Air Tightness
- Time Saving (up to 40% on your labour)
- Cost Effective (cut labour costs)
- Tidy Installation (perfect for exposed installations)
